# Introduction and Notes

---

The ACHA-National College Health Assessment (ACHA-NCHA) is a national research survey organized by the American College Health Association (ACHA) to assist college health service providers, health educators, counselors, and administrators in collecting data about their students' habits and behaviors on the most prevalent health topics. The ACHA-NCHA now provides the largest known comprehensive data set on the health of college students, providing the college health and higher education fields with a vast spectrum of information on student health.

ACHA initiated the original ACHA-NCHA in 2000 and the instrument was used nationwide through the Spring 2008 data collection period. A revised survey, the ACHA-NCHA-II, was in use from Fall 2008 - Spring 2019 data collection periods. The survey was redesigned again, and data collection with the ACHA-NCHA III began in Fall 2019.

Please note that it is not appropriate to compare trends between versions of the survey. Directly comparing data points between the Original ACHA-NCHA, the ACHA-NCHA II, and the ACHA-NCHA III can lead to an erroneous conclusion and is not recommended.

## Notes about this report:

1. Missing values have been excluded from analysis and only valid percents are included in this document, unless otherwise noted.
2. **The ACHA-NCHA III is programmed differently than earlier versions of the survey.** Rather than asking the respondents to answer every question (and offering a "not applicable" option), display logic was used throughout the survey to determine whether, based on their response to an earlier question, the student saw a follow-up question. This makes the valid percents of certain questions impossible to apply to the entire sample, as the denominator used was limited to only the number of students that saw the question. When appropriate, results are also presented using the entire sample as the denominator to show the proportion of the overall sample that experienced a particular issue. These differences in presentation are carefully noted throughout the document and will often explain differences observed between this document and the full data report. Please look carefully at descriptions of the data presented in each table, as well as any footnotes included.
3. **About the use of sex and gender in this report:** Survey results are reported by sex based on the responses to questions 67A, 67B, and 67C. The responses to these questions are used to create a new variable called RSEX. RSEX is used for organizing results in the ACHA-NCHA report documents. Respondents are reported as cis men or cis women only when their responses to 67A, 67B, and 67C are consistent with one another. If gender identity is consistent with sex at birth AND "no" is selected for transgender, then respondents are designated as either cis men or cis women in RSEX. If respondents select "yes" for transgender OR their sex at birth is not consistent with their gender identity, then they are designated as transgender/gender non-conforming in RSEX. A respondent that selects "intersex" for sex at birth, "no" for transgender, and man or woman for gender identity are designated as cis men or cis women in RSEX. A respondent that selects "intersex" for sex at birth, "yes" for transgender, or selects a gender identity other than man or woman are designated as transgender/gender non-conforming in RSEX. A respondent that selects "another identity" on 67C is designated missing in RSEX. A respondent that skips any of the three questions is designated as missing in RSEX. Totals displayed in this report include missing responses. Please see the ACHA-NCHA III survey codebook for more information about how data on sex and gender are coded.

Beginning in Spring 2021, responses for transgender and gender-nonconforming students became readily available directly in the report documents. We've prepared the following tips for using these report documents.

## Important considerations with this format:

- Percentages in the Executive Summary may represent a very small number of transgender/gender non-conforming students and can limit the generalizability of a particular finding. To assist with the interpretation of the percentages displayed in the Executive Summary, the total sample size for each group has been added to every page.
- We encourage ACHA-NCHA surveyors to carefully review their report documents, particularly among the student demographic variables, and consider students who may be inadvertently identified in the results based on a unique combination of the demographic characteristics before sharing the documents widely or publicly. This is especially true for very small schools, as well as schools that lack diversity in the student population.
- Think about the implication of working with and documenting very small samples – from the perspective of making meaningful interpretations, as well as the privacy of respondents. This is true of all demographic variables, and not limited to gender identity. You may consider a minimum cell size or another threshold by which you make decisions about making your Institutional Data Report publicly available. It is less of a concern in your Institutional Executive Summary as we only display the percentages with the overall sample size.

This Executive Summary highlights results of the ACHA-NCHA III Fall 2024 survey for Reference Group consisting of 33763 respondents. The response rate was 10%.

## Findings

Cis Men n =	9298
Cis Women n =	21189
Trans/GNC n =	2078

### A. General Health and Campus Climate

- 50.9 % of college students surveyed ( 62.2 % cis men, 47.8 % cis women, and 30.8 % transgender/gender non-conforming) described their health as **very good or excellent**.
- 86.8 % of college students surveyed ( 90.6 % cis men, 86.8 % cis women, and 70.5 % transgender/gender non-conforming) described their health as **good, very good, or excellent**.

Proportion of college students who reported they *agree* or *strongly agree* that:

	Cis Men	Cis Women	Trans/ Gender Non- conforming	Total
Percent (%)				
I feel that I belong at my college/university	69.9	68.4	56.9	67.8
I feel that students' health and well-being are a priority of my college/university	59.7	57.4	42.1	56.9
I feel that the climate of my college/university encourages free and open discussion about students' health and well-being	65.0	64.7	50.8	63.6
We are a college/university where we look out for each other	59.5	58.0	42.9	57.3

### B. Nutrition, BMI, Physical Activity, and Food Security

College students reported:

#### Definitions:

- Recommendation for **aerobic activity**: 150 minutes or more of moderate-intensity physical activity per week or 75 minutes of vigorous-intensity physical activity or the equivalent combination
- Recommendation for **strength training**: 2 or more days a week of moderate or greater intensity activities that involve all major muscle groups
- **Active Adults** meet the recommendation for strength training **AND** aerobic activity
- **Highly Active Adults** meet the recommendation for strength training and **TWICE** the recommendation for aerobic activity (300 minutes or more of moderate-intensity physical activity per week or 150 minutes of vigorous-intensity physical activity or the equivalent combination)

	Percent (%)	Cis Men	Cis Women	Trans/ Gender Non-conforming	Total
Guidelines met for <b>aerobic exercise only</b>		77.9	67.9	64.3	70.4
Guidelines met for <b>Active Adults</b>		54.4	36.8	26.6	41.2
Guidelines met for <b>Highly Active Adults</b>		45.2	28.7	19.0	32.8

### Food Security

Based on responses to the *US Household Food Security Survey Module: Six-Item Short Form (2012)* from the USDA Economic Research Service.

	Percent (%)	Cis Men	Cis Women	Trans/ Gender Non-conforming	Total
High or marginal food security (score 0-1)		62.1	56.7	50.3	57.7
Low food security (score 2-4)		21.6	24.6	24.9	23.9
Very low food security (score 5-6)		16.2	18.7	24.8	18.5
<b>Any food insecurity</b> (low or very low food security)		37.9	43.3	49.7	42.3

## C. Health Care Utilization

#### College students reported:

	Percent (%)	Cis Men	Cis Women	Trans/ Gender Non-conforming	Total
Receiving psychological or mental health services within the last 12 months		22.0	36.3	58.6	33.7

Spending time outdoors with the intention of tanning at least once in the last 12 months		34.5	54.9	31.1	47.4

**D. Impediments to Academic Performance**

Respondents are asked in numerous places throughout the survey about issues that might have negatively impacted their academic performance within the last 12 months. This is defined as negatively impacting their performance in a class or delaying progress towards their degree. Both types of negative impacts are represented in the figures below. Please refer to the corresponding Data Report for specific figures on each type of impact. Figures in the left columns use all students in the sample as the denominator. Figures in the right columns use only the students that experienced that issue (e.g. students who used cannabis, reported a problem or challenge with finances, or experienced a particular health issue) in the denominator. (items are listed in the order in which they appear in the survey)

	Negatively impacted academic performance among all students in the sample				
	Percent (%)	Cis Men	Cis Women	Trans/ Gender Non- conforming	Total
Alcohol use		2.1	1.2	2.6	1.6

- 25.1 % of college students reported driving within 6 hours of using cannabis/marijuana in the last 30 days.\*  
\*Only students who reported driving in the last 30 days and using cannabis in the last 30 days were asked this question.

**Estimated Blood Alcohol Concentration (or eBAC)** of college students. Due to the improbability of a student surviving a drinking episode resulting in an extremely high eBAC, all students with an eBAC of 0.50 or higher are also omitted from these eBAC figures. eBAC is an estimated figure based on the reported number of drinks consumed during the last time they drank alcohol in a social setting, their approximate time of consumption, sex, weight, and the average rate of ethanol metabolism. Only students who reported drinking alcohol within the last 3 months answered these questions.

## J. Ongoing or Chronic Conditions

The questions for the *ongoing or chronic conditions* are presented differently in this report than the order they appear in the survey. In the survey, all items appear in a single list, ordered alphabetically. In this report, the conditions are presented in groups to ease burden on the reader. The findings are divided into mental health conditions, STIs and other chronic infections, and other ongoing or chronic conditions in this report.

### Demographics of Participating Institutions

Fifty postsecondary institutions self-selected to participate in the Fall 2024 ACHA National College Health Assessment and 35,347 surveys were completed by students on these campuses. For the purpose of forming the Reference Group, only institutions located in the United States that surveyed all students or used a random sampling technique, and used the ACHA-NCHA III (currently only offered as a web survey) are included in the analysis, yielding a final data set consisting of 33,763 students at 48 schools. Demographic characteristics of the 48 campuses follow.
